

Namit Yadav

Frontend enthusiast with 11+ years building and maintaining large React SPAs. Recent work spans large-scale framework migrations, progressive-rollout and feature-flag infrastructure, and automated quality gates across multi-app codebases.

EXPERIENCE

Zinier, Bengaluru — *Technical Lead - Frontend*

July 2024 - Present

- Led migration of 6 frontend applications from React 17 to 18.3.1 and Node 14 to 22, upgrading the state and routing chain in one coordinated move (Redux 5, React Router 6.26). Cut Snyk-reported vulnerabilities from 734 to 215, critical issues down 81% (64 → 12).
- Built feature-flag and experimentation infrastructure in the shared component library (Firebase Remote Config, GA4), shipped across three applications; used it to roll out a major component rewrite per-organisation behind a flag, with automatic fallback to the legacy implementation.
- Authored the architecture decision record for consolidating 45+ data grids onto a single @tanstack/react-table implementation — three phases sequenced by risk, a QA checkpoint per phase, and defined rollback triggers.
- Introduced visual regression testing (Storybook, Playwright) and added lint, unit-test and CSS-lint gates to every deployment pipeline, moving quality checks ahead of deploy.
- Built a Slack code-review bot tracking PR review quality, increasing the frequency of substantive technical feedback.
- Mentored engineers through structured 1:1s and career planning; contributed to frontend hiring.

Forto, Berlin — *Senior Frontend Engineer*

December 2020 - June 2024

- Owned frontend delivery end to end for the Process & Workflows team, one of six cross-functional teams building Forto's Transport Management System.
- Built the team's micro-frontend with Webpack Module Federation, decoupling our release cycle from the other teams and moving from synced releases to daily deployments, 2-3× the previous frequency.
- Built a document generation component for shipping

SKILLS

Technical Leadership:

ADRs, Technical Strategy, Mentorship, Project Management, RCA, Progressive Delivery.

Core Frontend:

JavaScript (ES6+), TypeScript, React, Node, CSS Modules, Webpack.

State & Architecture:

Redux, MobX, React Context.

Testing & Quality:

Jest, React Testing Library, Cypress, Playwright, Visual Regression, TDD, Feature Flags.

Infrastructure & Tools:

CI/CD, Git, Performance Optimization, Responsive Web Design

AI Assisted

Development:

Codemods, Agent-Assisted Refactoring, Prompt design for code generation

paperwork (House Bill of Lading and related freight documents) via pdfgeneratorapi — legally operative documents where a data error delays a shipment.

- Introduced end-to-end testing with Cypress, and contributed reusable components to the centralized Design System consumed across all six teams.
- Mentored junior engineers and ran onboarding for new joiners.

Hevo, Bengaluru — Frontend Engineer

December 2019 - October 2020

- Engineered the frontend for a high-scale data integration platform, maintaining >90% code coverage through TDD.
- Partnered with Backend and QA to architect end-to-end features from conception to production.

Empyra, Bengaluru — Technical Lead - Frontend

November 2017 - December 2019

- Promoted from Senior Frontend Engineer. Led a team of five engineers delivering the Cynaptx Career Services portal.
- Drove the departmental shift from class components to React Hooks, improving reusability and team velocity.

Appunfold, Bengaluru — Frontend Developer

March 2017 - November 2017

- Built the front end for Appunfold (now UserIQ), a Mobile Customer Experience platform.

Infosys, Bengaluru — Senior Systems Engineer

July 2014 - March 2017

- Built a bank loan origination application (Java, Ext JS) for Goldman Sachs and engineered securities data queries in SecDb.
